

Problem Code on JSFiddle: <https://jsfiddle.net/smax/b35rc69m/>

Hint:

To **remove a hobby**, you can take advantage of the **filter()** method you may use on a JavaScript array. Simply filter everything you want to keep => This effectively then **removes the rest**. Why would you use that? Because it provides an **immutable way of removing elements** from an array (i.e. it **returns you a brand-new array**).

To get access to the **index of an element**, you can use the **second argument** inside the **map()** method function: **map((item, index) => ...)**
